

IN THE CLAIMS

Claim 1 (original): A package comprising a ostomy receiving appliance and a bag for disposing a used ostomy receiving appliance, the bag defining a first and a second compartment, the bag having an open end and a cavity, the cavity defining the second compartment which is sealable so as to confine the used ostomy receiving appliance, wherein the bag is folded so as to define the first compartment and wherein the ostomy receiving appliance is accommodated in the first compartment.

Claim 2 (original): A package according to claim 1, wherein the folded bag defines at least three folded edges.

Claim 3 (currently amended): A package as claimed in claim 1 ~~or~~ 2, wherein the bag has a first wall and a second wall and edges connecting a closed end and the open end of the bag, wherein the edges are folded so as to cover each a longitudinal strip of the first wall, said bag subsequently is folded so that the closed end of the first wall is parallel to the open end of the first wall to form the first compartment.

Claim 4 (currently amended): A package as claimed in claim 1 ~~any of the preceding claims~~, wherein the closed end of the bag, in its folded position, leaves a part of the open end of the bag

free as a flap capable of covering the inlet opening of the compartment.

Claim 5 (original): A package as claimed in claim 4, wherein the flap and the outer surface of the second wall forming the first compartment are provided with means for releasable attachment of the flap to the surface of the wall.

Claim 6 (currently amended): A package as claimed in claim 1 ~~any of the preceding claims~~, wherein the bag is made from a material being substantially impervious to odour.

Claim 7 (original): A method of producing a package comprising a ostomy receiving appliance and a bag for disposing a used ostomy receiving appliance, the bag defining a first and a second compartment, the bag having an open end and a cavity, the cavity defining the second compartment which is sealable so as to confine the used ostomy receiving appliance, the bag being folded so as to define the first compartment and the ostomy receiving appliance being accommodated in the first compartment, the method comprising the steps of:

- placing an ostomy receiving appliance on a bag, and then
- folding the bag so as to define the first compartment.

Claim 8 (original): A method according to claim 7, wherein the

bag has a first wall and a second wall and edges connecting a closed end and the open end of the bag, wherein the edges are folded so as to cover each a longitudinal strip of the first wall and a part of the ostomy receiving appliance and wherein the step of folding comprises the step of folding the closed end of the first wall of said bag so that is parallel to the open end of the first wall and covers the folded strips and the ostomy receiving appliance to form the first compartment.

Claim 9 (original): A method as claimed in claim 8, wherein the closed end of the bag, in its folded position, leaves a part of the open end of the bag free as a flap which is then folded to cover the inlet opening of the first compartment.

Claim 10 (currently amended): A method as claimed in claim 8 ~~or~~ 9, wherein the flap is secured to the outer surface of the second wall for closing the first compartment by means for releasable attachment of the flap to the surface of the wall.

Claim 11 (new): A package as claimed in claim 2, wherein the bag has a first wall and a second wall and edges connecting a closed end and the open end of the bag, wherein the edges are folded so as to cover each a longitudinal strip of the first wall, said bag subsequently is folded so that the closed end of the first wall is parallel to the open end of the first wall to form the first

compartment.

Claim 12 (new): A package as claimed in claim 2, wherein the closed end of the bag, in its folded position, leaves a part of the open end of the bag free as a flap capable of covering the inlet opening of the compartment.

Claim 13 (new): A package as claimed in claim 3, wherein the closed end of the bag, in its folded position, leaves a part of the open end of the bag free as a flap capable of covering the inlet opening of the compartment.

Claim 14 (new): A package as claimed in claim 2, wherein the bag is made from a material being substantially impervious to odour.

Claim 15 (new): A package as claimed in claim 3, wherein the bag is made from a material being substantially impervious to odour.

Claim 16 (new): A package as claimed in claim 4, wherein the bag is made from a material being substantially impervious to odour.

Claim 17 (new): A package as claimed in claim 5, wherein the bag is made from a material being substantially impervious to odour.

Claim 18 (new): A method as claimed in claim 9, wherein the flap

is secured to the outer surface of the second wall for closing the first compartment by means for releasable attachment of the flap to the surface of the wall.
